

SIDE · EARLIER WORK · 2023

NRC IRAP application, 2023: project description, objectives and activities

Pages 3 to 5 of the information request Side submitted to NRC-IRAP in September 2023. The project was approved for support (Oct 2023 to Mar 2024). Company data, the ethics form and the financial annexes are omitted.

The filing uses "AI-powered" throughout, as filings did in 2023. What was running: a rule-based conversation workflow, then in-house NLU models trained on transcripts from captured buyer conversations, built by the internal team. A later UBC Master of Data Science capstone collaboration produced lead-scoring models that did not ship. I wrote the filing and directed the programme.

Problem/Business Opportunity	The problem and business opportunity that Side addresses in the pre-construction real estate market can be summarized as follows: Problem: Limited Agent Access to Pre-Construction Market: Real estate agents often face challenges when it comes to marketing and selling pre-construction homes. Access to potential buyers in this niche market can be limited, hindering their ability to expand their portfolios and generate revenue. Time-Consuming Lead Generation and Qualification: Traditional lead generation and qualification processes can be time-consuming and resource-intensive for agents. This inefficiency results in missed opportunities and reduced productivity. Lack of Personalized Marketing: Personalized marketing is crucial in the real estate industry, but creating tailored campaigns for each prospect can be challenging and time-consuming. Manual Transaction Processes: The manual handling of transactions, including contract generation and paperwork, can lead to errors and delays, impacting the overall customer experience and agent efficiency. Business Opportunity: Side seizes the business opportunity by providing innovative AI-powered solutions that address these pain points: 1. Automated Lead Generation: Side's platform automates lead generation, expanding agent reach and providing access to a broader pool of potential buyers. 2. Efficient Lead Qualification: By leveraging AI algorithms, Side streamlines the lead qualification process, allowing agents to focus on high-potential prospects and optimize their resources. 3. Personalized Marketing Automation: The platform enables agents to create personalized marketing campaigns using AI-driven tools, increasing conversion rates and enhancing customer engagement. 4. Seamless Transaction Management: Side's platform offers efficient transaction management features, such as automated contract generation and digital processes, reducing errors and saving time. By addressing these challenges and providing AI-powered tools, Side empowers real estate agents to elevate their sales strategies, expand their portfolios, and maximize their revenue potential in the pre-construction real estate market. The company taps into the growing market demand for new homes and positions agents as industry leaders in this competitive space.
Project Title	"Revolutionizing Pre-Construction Real Estate Sales with AI-Powered Solutions"

First IRAP project?	Yes
Start and End Dates	Start: 01OCT2023 End: 31MAR2024
Objectives	Q4 2023 - Phase 2: Lead Generation and Nurturing 1. Deploy AI-driven lead generation strategies to increase website traffic by 30% and lead conversion rate by 20%. 2. Launch a conversational AI tool for lead engagement and nurturing to reduce response time by 50%, improve lead qualification accuracy by 15%, and enhance customer satisfaction. Q1 2024 - Phase 3: Transaction Facilitation 1. Launch transaction management tools to enhance scalability and efficiency. 2. Implement an AI-driven lead prequalification process to increase accuracy by 20% and reduce processing time by 50%. 3. Add contract generation and e-signature features to the platform to reduce contract generation time by 60% and expedite the turnaround time for e-signatures. 4. Integrate the platform with CRM and financial institutions to improve data accuracy and productivity.

Activities	Objective 1: Deploy AI-driven lead generation strategies • Benchmark all relevant metrics, including website traffic and lead conversion rates. • Conduct a comprehensive SEO audit to identify optimization opportunities. • Implement AI-driven content personalization to tailor content for target audiences. • Develop and integrate chatbots with lead capture forms for efficient lead engagement. • Implement natural language processing techniques for personalized responses. • Create segmented lead nurturing email campaigns utilizing data schemas and data labelling. • Implement lead scoring algorithms based on ML modelling and data refinement. • Customize CRM fields for lead tracking, ensuring data integration and quality. • Implement CRM automation for data synchronization, integrating it with secure APIs. • Establish secure API connections with financial partners for seamless data transfer. • Implement data validation checks to ensure data integrity and quality. Objective 2: Conversational AI tool for lead engagement and nurturing • Develop a user-friendly transaction platform with data schemas for efficient transaction management. • Implement real-time transaction tracking using data extraction and visualization. • Implement advanced lead scoring models, incorporating ML modelling for accuracy. • Streamline lead data collection processes using data cleansing techniques. • Develop a user-friendly contract generation tool with integration capabilities. • Implement secure e-signature capabilities for contract processing. • Integrate the platform with CRM and financial institutions, ensuring data integration and productivity improvements.
Resources to be supported	3 Technical resources (1 TBH).
