

Soroush Seif

AI SYSTEMS LEAD · AGENTIC PLATFORMS & REVENUE AUTOMATION

Ships production AI systems · **19-node nightly LangGraph engine, 58 runs since July** · **multi-tenant agent runtime, 9 connectors** · **1,559 tests green**

SUMMARY

I build and ship production AI systems: a **multi-tenant agent runtime**, built and audited, with 9 connectors, and a **19-node nightly LangGraph engine** that finds its own work, writes the code and lands it by trust class behind deterministic gates. I define the architecture, agent roles, data flows, approval gates and acceptance criteria, then **direct AI coding agents** through implementation and testing. Since 2012 I have turned growth constraints into working revenue systems, and as a **government-appointed CDAP advisor** I have **assessed 800 businesses**. Now focused on long-horizon ownership inside one embedded team.

How I work: define architecture & acceptance criteria → direct AI coding agents → gate by class of change, with scope allowlists and a veto I use → measure with outcome attribution

SYSTEMS BUILT · *architecture, agent design, acceptance criteria and delivery direction owned end-to-end*

- **theSide.io Intelligence Platform.** A multi-tenant agent runtime, built and audited: proposer → critic → ranker → supervisor turns live client data into **scored, human-approved actions** across **9 connectors**, with outcomes attributed over 7, 14 and 28 days. Forced structured output, a deterministic ranker, idempotency claims, a signed audit chain. **32 tables, 39 API routes; 0 TypeScript errors, 0 ESLint findings across 369 files, 21 test groups passing** (automated audit, June 2026).
- **Nightshift, an autonomous SEO & AI-visibility engine.** A **19-node LangGraph state graph** with a bounded revision loop, run nightly: it crawls, mines search and answer-engine gaps, prioritizes on a weighted score the retro tunes, and drafts brand-checked changes. Work lands by **trust class A/B/C** behind link validation, brand QA, pytest, lint, typecheck, build and two required CI workflows; I keep a veto and a revert. **58 runs across 48 nights since July 2026; 1,559 tests passing;** caps of \$45 a night, \$250 a week.
- **PerfectMind MCP server.** Diagnosed a recreation-management platform's workflow gaps, then specified and delivered an **MCP integration layer** exposing its operations to AI agents as typed, callable tools.

EXPERIENCE

Side · Co-Founder

Vancouver, BC · Oct 2021 – Present

- Own growth, product and AI transformation, and **ship the firm's production software:** requirements, agent roles, data flows and approval gates, then directing AI coding agents through implementation and testing.
- **AI enablement at scale.** Government-appointed **CDAP advisor: assessed 800 businesses** and delivered **300 roadmaps** across sales, marketing, automation and practical AI adoption, then built the first piece inside each client's real budget. **Adoption was the deliverable;** a roadmap nobody follows is worth nothing.
- **Identified an underserved segment and conceived a conversation-driven sales platform** for pre-construction real-estate agents. Project-marketing firms served developers; nothing served the agent. Shipped in **2020-21, before generative AI**, handling **1,000+ buyer conversations per day:** capture, prequalification and nurture, then handing agents a ready-to-close deal.
- **Owned the product through three technology generations:** rule-based conversation workflows, then in-house NLU models trained on 8,000 annotated SMS and web-chat turns, then LLM agents. I directed the team at each transition; the team and a UBC master's capstone collaboration built the models. Improved lead-to-transaction conversion from **1% to 3%** on **~\$45M year-one transaction value (transactions, not revenue)**, then **productized the service into a repeatable subscription / commission offering.**
- Architect and operate **end-to-end client-acquisition systems** for ~45 clients: demand generation, landing pages and forms, qualification, email/SMS nurture, CRM orchestration (tagging, stage movement, routing, alerts), sales handoff and attribution.

Lazymeal · Co-Founder

Vancouver, BC · 2012 – 2020

- Led growth for a B2B food-tech marketplace and owned the commercial engine from zero: sales, partnerships, vendor onboarding and the marketing that fed it. **\$17M+ gross food sales (marketplace GMV), 400+ vendor accounts.**

SKILLS

AI Systems & Agent-Directed Delivery: multi-agent workflow architecture · LangGraph · RAG / pgvector · MCP integrations · human-in-the-loop approval gates · evals & observability · prompt & context engineering · production delivery with Claude Code and Codex

AI Transformation & Enablement: business diagnosis & growth-constraint analysis · digital-transformation roadmaps (CDAP) · AI adoption & change management · training and enablement of non-technical teams · operating-model design · governance & guardrails

Revenue & Growth Systems: full-funnel acquisition-to-close architecture · demand generation · paid media (Google/Meta) · landing pages & conversion optimization · lifecycle & nurture (email/SMS) · sales enablement & handoff design · SEO/GEO

CRM & Revenue Operations: lifecycle architecture · lead qualification and routing · pipeline stages and governance · email/SMS automation · attribution and reporting · GoHighLevel (6+ years, hands-on)

EDUCATION

University of British Columbia · B.A.Sc., Integrated Engineering
